

EPS PRODUCT

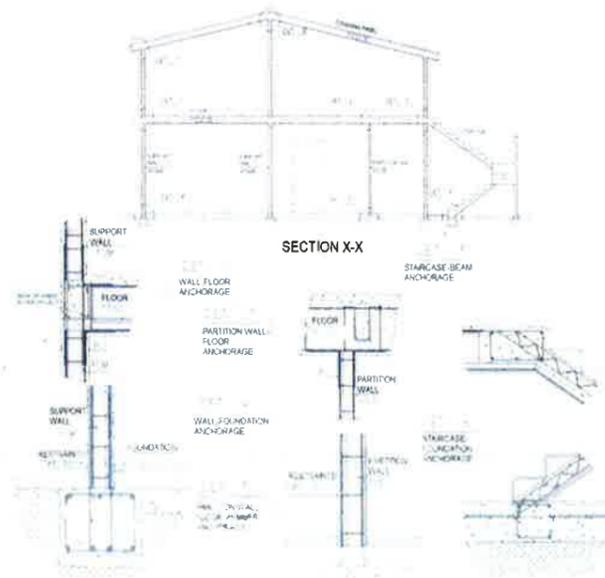

- Expanded Polystyrene (EPS) panel with customized Galvanized wire mesh—produced in factory
- An industrialized building system (IBS) utilizing factory manufactured light weight panel for building construction

PSM # 25- S.S DENSITY 15 kg/m ³	EPS THICKNESS (MM)	CONCRETE THICKNESS (MM)	DISTANCE BETWEEN THE TWO	TOTAL THICKNESS (MM)	PANEL WEIGHT (KG/M ²)	WALL WEIGHT (PANEL +CONCRETE) (KG/M ²)

EVERYONE CAN AFFORD TO OWN A INSULATED HOME

INSAFOAM IM2 system is the solution for rapidly constructible, economical, sustainable and energy efficient building

COMPANY PROFILE

INSAFOAM INSULATION (Malaysia) Sdn Bhd, a wholly owned Malaysian company, was incorporated on September 8, 1992. Insafoam manufactures and distributes its branded **INSAPIPE** range of polyurethane pre-insulated pipes in Malaysia, the South-East Asia region and for the Middle East region. After past over the year, now Insafoam expanding business in *Industrialized Building System (IBS)* and subsidiaries company under Insafoam are known as **INSAFOAM INSULATION(N) SDN BHD** as manufacturer and **INSAFOAM IM2 SYSTEM SDN BHD** as marketing company.

INSAFOAM SYSTEM SDN BHD adopts IM2 from Italian technology as main products. For over 30 years, our associated Italian company as aspired has designing and developing the technology to produce building system components, marketing worldwide turnkey systems and assisting its customers during the manufacturing, design and installation phases.

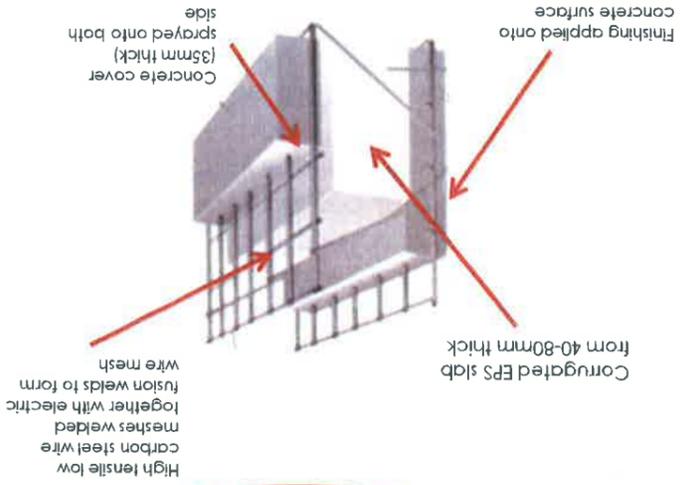

OUR VISION

The company aims to become the leader in the industry and the region and to increase its international market. We embrace the philosophy that a satisfied customer is a repeat customer.

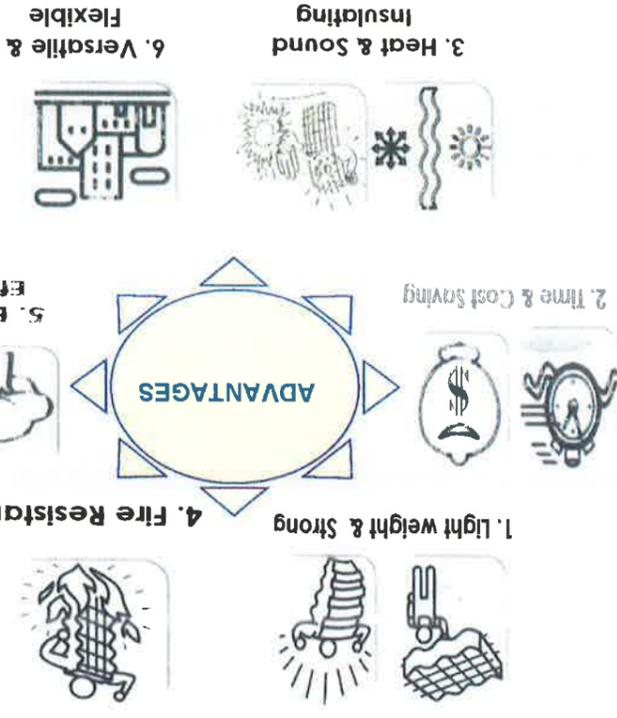

OUR MISSION

- To offer people from all over the country the opportunity to build a safe house, in a short time, guaranteeing the highest levels of comfortable living and considerable energy saving without forgoing design and the wide range of finishes.
- We are not alone a builder and supplier but to offer everyone can afford to own an insulated home.

WHAT IS EPS?

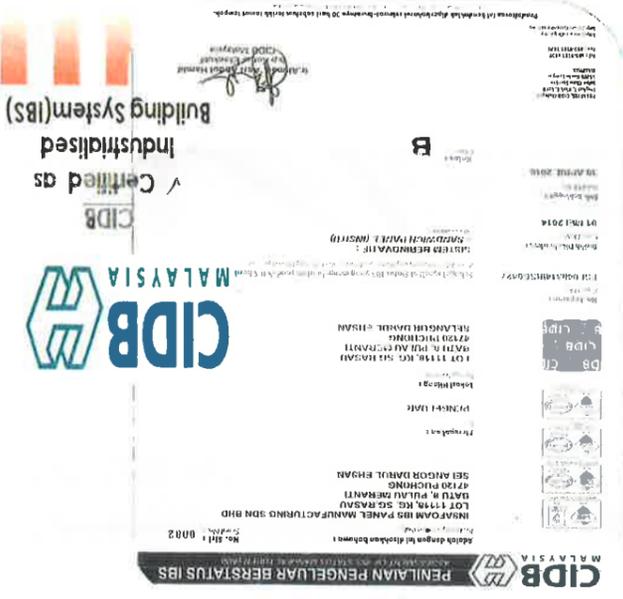

ITEM	Description	Ins foam IM2	Conventl Panel	Precast
1	Light weight structure	0.75	1	1.3
2	Time & cost saving	0.75 & 0.85	1	0.9
3	Earth Quake Resistance (RS)	9	4	4
4	Thermal Insulation	1.25	1.0	1.0
5	Sound Insulation (STC)	38	28	30

TEST & APPROVALS (Malaysia)

✓ 2 Hrs fire resistant test (BS476-Part 2)
 ✓ Acoustic insulation test achieving STC index of 38

PANEL INSTALLATION

✓ The ins foam IM2 panel remarkable lightness allows easy and quick transport and handling
 ✓ The ins foam IM2 panel can be manually positioned and linked together by a nail gun or conventional

Single panel for floor and roofing

The chases are easily created by melting the polystyrene behind the metal mesh using a hot air gun or any other similar device

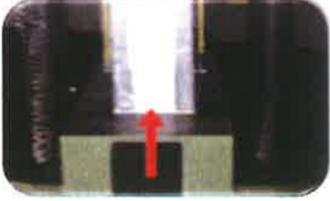

The placement of service pipes (electricity, water, gas), is carried out quickly and easily, behind the wire mesh.

Spraying of the coating layer on the panel using the plaster sprayer

LABORATORY TESTING OF PANEL

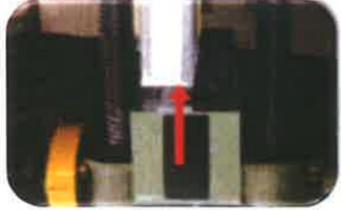

1. Centred Compression

-Maximum loading = 707 KN/m

3. Simple flexion

70mm single panel (comp.layer 30mm) — Maximum loading = 12.2KN/m

2. Eccentric compression

60mm x 3m single panel—Maximum loading + 1130 KN/m (masonry wall +700KN/m)
